

Development of biofungicides and growth promoters for Andean crops

BOLIVIA / COLOMBIA

 Webstory

The technological solution

Development and use of biofertilizers, biofungicides, biopesticides and growth promoters with the potential to replace the traditional ones generated by chemical synthesis. Most of these products can be produced locally by communities or specialized small businesses.

Description

Tricobal L is a biological product that contains two species of the trichoderma fungus (*Trichoderma harzianum*) and (*Trichoderma koningiopsis*). It also contains two species of *Bacillus* (*Bacillus subtilis*) and (*Bacillus amyloliquefaciens*).

Results

- It promotes the growth, increase and strengthening of the root, the foliage and improves the photosynthetic rate.
- Decreases flower drop and stimulates fruit set, increasing crop yields.
- It stimulates the growth of plants affected by drought or frost, because it promotes a vigorous regrowth of the foliage.
- Up to 20% increase in yield due to the use of biofertilizers and biopesticides in onion, potato, lettuce, tomato, corn and quinoa.
