

Improvement of integrated management of rice cultivation for CAHB control

PANAMA / COLOMBIA / COSTA RICA / NICARAGUA

Webstory

The technological solution

The integrated management of the crop for the control of the Mite Fungus Bacteria Complex (CAHB) made the producers benefit from the use of new agronomic management methods, of resistant varieties and other recommendations.

Description

The improvement of the integrated management of rice cultivation consisted in the establishment of sowing times, nutritional demands of the crop based on the different production systems, use of resistant varieties and determination of the effect of these on the development of pests and diseases.

Results

- Establishment of a new method of integral management of rice cultivation.
- Generation, adaptation and validation of agro technologies, for their dissemination by specialized extension services.
- Strengthening the capacities of farmers, technical assistants and specialists, in the Integrated Management of Rice Cultivation through exchange, courses and training.
- Decrease in production costs and increase in gross income to the producer.
