

Solar dryers for cocoa

COSTA RICA / PANAMA

 Webstory

The technological solution

Strengthen the livelihoods of families dedicated to cocoa production in the territory of the binational Costa Rica-Panama basin with the goal of reducing the vulnerability of these populations to extreme hydrometeorological events.

Description

Solar drying pilot systems were designed and built with photovoltaic panels for micro-beneficiation of cocoa. The dryers have the capacity to process 200 kg / week, contributing to the quality of the final product and the economy of the producer.

Results

- Two pilot solar drying systems with photovoltaic panels were designed and built.
- Workshops were organized for the participatory analysis of risks, opportunities and physical and social weaknesses in the face of an extreme climatic phenomenon.
- The project activated a network of professionals, with responsibility for the production, processing and marketing of cocoa in the regions of interest.
