

Intensive Rice Cultivation System (SICA) in the Americas

COSTA RICA / COLOMBIA / DOMINICAN REPUBLIC

i Webstory

The technological solution

Reduce the vulnerability of rice producers to the biophysical and socioeconomic impacts of climate change, by reducing the sensitivity of their production systems and improving their adaptive capacity.

Description

SICA is a technology to grow rice using small machinery, based on four agroecological principles that support an innovative management of crops, water, soil and nutrients, to improve the efficiency of the use of inputs and productivity.

Results

- 25% more performance than the traditional system.
- 96% reduction in the amount of seed for sowing.
- 45% water saving during the growing period of the crop.
- 10% reduction in production costs and profits 43-68% higher than the traditional system.
